This table shows all the imported accounts and their status while cracking. Accounts that have been cracked will show up with a red background if they are not locked-out, disabled, or expired. If an account is cracked but it is disabled, locked-out, or expired, the text color will be red.
To select accounts in bulk, you can click the hyperlinked labels on the top bar labeled 'All Accounts', 'Cracked', 'Expired', etc. To access remediation and copy/remove operations, there is a menu when you right click on accounts you have selected.
To show or hide columns in the table, click the upper-left corner button. To sort the rows, click on the column headers, clicking twice will sort in the other direction.
All Accounts: 6 Cracked: 5 Partially Cracked: 0 Selected: 0 Locked Out: 0 Disabled: 3 Expired: 0 Non-Expiring: 5

1) What worked well in the lab?

   The lab was lagging a lot, even when I switched internets was still running with issues. That was my first-time having issues with the labs.

2) What parts were troublesome?

   Besides the Lab server issues, I had no problems during the assignment.

3) Over all impression of the lab?

   It is scare how the L0phtCrack works with the right information, using the ip which is not hard to get and the domain you can get all the information in someone machine.
